DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/11/2009 has been entered. The amendment filed on 8/11/2009 has been fully considered and made of record.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 10 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In particular, claims 1-8 appear to be directed to the embodiment shown in Fig. 11, where stamped wire elements 11 are bent toward the axial center of the stator and are connected to ring 40 disposed radially inwardly. Claim 10, on the other hand, recites limitations that appear to be directed to the embodiments

Application/Control Number: 10/530,908

Art Unit: 3729

shown in Figs. 13c and 14c. Therefore, a conflict exists, since claim 10 is directed to limitations from two distinct embodiments.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Page 3

5. Claims 1-8 and 10 are rejected under 35 U.S.C. 112, second paragraph, as

being indefinite for failing to particularly point out and distinctly claim the subject matter

which applicant regards as the invention.

6. In claim 1, step c) the phrase "two legs of the winding constituting some stamped

wire elements which are U-shaped" renders the claim indefinite, because as currently

recited it would appear the winding constitutes some stamped wire elements which are

U-shaped. It is the wire elements which constitute the winding, not the other way

around, and it is therefore unclear how the winding can constitute stamped wire

elements. Further, the phrase "so that their bent ends are orientated radially inwards"

renders the claim indefinite, because nowhere does the claim recite wire elements

having bent ends.

Suggested Amendment

7. The Examiner suggests amending the claims as shown below, as this appears to

define over the art previously cited and to overcome the above rejections as well as to

correct some other informalities.

1. A method for manufacturing multiphase windings of an electric machine with

the following process steps: a) deforming a cross section of elongated wire elements by

stamping a cross-sectional profile of said wire elements to increase a slot space factor;

Application/Control Number: 10/530,908

Art Unit: 3729

9. b) loading offsetting dies with some of the stamped wire elements to constitute a winding, with other of the stamped wire elements to constitute an integrated star point, and with further of the stamped wire elements for supplying current to the winding;

10. c) forming a winding head with an integrated star point by simultaneously moving, by means of the offsetting dies, two legs of the some of the stamped wire elements, which are U-shaped, in a circumferential direction that is transverse to a longitudinal direction of the loaded stamped wire elements, arranging the other of the stamped wire elements, which have bent ends, so that their bent ends are orientated radially inwardly toward one another in a shape of a star, and arranging the further of the stamped wire elements on an outside of the winding head opposite to the other of the stamped wire elements;

11. d) connecting the bent <u>and radially inwardly oriented</u> ends of the other <u>of the</u> stamped wire elements with a connecting ring, whereby an electrical contacting of the integrated star point is completed, and wherein the connecting ring is disposed radially <u>inwardly</u> on an inside of the winding head.

- 12. 2. The method as recited in claim 1, wherein said stamping includes stamping a cross-sectional profile in a wedge shape onto the wire elements.
- 13. 3. The method as recited in claim 1, wherein said stamping includes stamping an oval or circular cross-sectional profile onto the wire elements.
- 14. 4. The method as recited in claim 1, further comprising loading the offsetting dies with the stamped wire elements in such a way that the other of the wire elements that constitute the integrated star point are offset from one another by an angle of 120°.

Deleted: winding constituting

Deleted: inwards

Deleted: current supplying

Deleted: star point constituting

Deleted: radial, inward-oriented

Deleted: inward

Application/Control Number: 10/530,908

Art Unit: 3729

15. 5. The method as recited in claim 1, further comprising shaping the winding head by means of an offsetting of the offsetting dies.

- 16. 6. The method as recited in claim 1, further comprising producing a wire cage and attaching it to a laminated core.
- 17. The method as recited in claim 6, further comprising providing the laminated core with an insulation in an attachment region of the wire cage.
- 18. 8. The method as recited in claim 1, further comprising contacting the some of the stamped wire elements to one another at a contacting end of the winding.

19. 10. Cancelled.

Allowable Subject Matter

20. <u>Claims 1-8 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office Action, and amended in a manner similar to the above suggestions.</u>

Response to Arguments

21. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LIVIUS R. CAZAN whose telephone number is (571) 272-8032. The examiner can normally be reached on M-F 8:00AM-4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, DERRIS H. BANKS can be reached on (571) 272-4419. The fax phone
